

21. An apparatus for preparing an interference indicating system with a flexible carrier having a disclosing agent disposed thereon according to Claim 20, further comprising a package for holding a plurality of flexible carriers bearing disclosing agent in a plastic container with a manually removable lid.

Abstract of Disclosure

[0043] A method and system for determining weather strip fit for the closure panels of a vehicle includes a flexible carrier with a transferable disclosing agent disposed on the flexible carrier. The flexible carriers may be applied to a closure panel of vehicle when the panel is in an open position, with the panel then being closed so as to allow the disclosing agent to either be transferred to the fixed side of the opening, or to be merely dislodged from the flexible carrier. In either case, the pattern of interference fit between the weather strip and the closure panel is then disclosed.
